NOTICE DATE: August 15, 2019

EFFECTIVE DATE: August 14, 2019

CORRECTION

NEW TEST

PML/RARA Quantitative
Order Code: QPML
CPT Code: 81315
Fee Code: G0452-26 (Pro)

Effective August 14, 2019, MLabs will perform PML/RARA Translocation, Quantitative testing and no longer forward this test to Tricore Reference lab. This new test will replace the qualitative assay currently sent to Tricore, test MDQ1517 (PMRAR) and will also replace the in-house test PML/RARA t(15;17) Translocation, Qualitative (PML).

Test Usage: Greater than 95% of acute promyelocytic leukemia (APL) cases harbor a t(15;17) translocation. This rearrangement results in the fusion of the PML and retinoic acid receptor alpha (RARA) genes located on chromosomes 15 and 17 respectively. Three breakpoint regions within the PML gene can be involved, resulting in three possible PML/RARA fusion types: bcr1 (long), bcr2 (variable), and bcr3 (short). This test quantitatively detects all three PML/RARA transcript variants in peripheral blood and bone marrow. Testing for PML/RARA can assist in the diagnosis, clinical management, and monitoring of APL.

Test Methodology: Reverse transcription followed by Real-Time Polymerase Chain Reaction (PCR)

Analytic Time: 2 - 7 days

Specimen Collection: Collect blood or bone marrow in a lavender top tube. Refrigerate and send intact blood or bone marrow specimen within 48 hours of collection. Fresh tissue (preferably 0.5cm3, sent in RPMI) and fresh aspirates or body fluids are acceptable. Refrigerate and send, preferably within 24 hours. Frozen tissue specimens – preferably frozen with 1 hour of collection – may also be sent frozen on dry ice. Fresh cell suspensions in RPMI should be refrigerated and sent, preferably within 48 hours. Frozen cell suspensions – preferably frozen with 1 hour of collection – may also be sent frozen on dry ice.
**NEW TEST CODES**

Effective August 21, 2019, MLabs will offer built codes for the following tests being sent to Mayo Medical Laboratories.
