**TEST METHODOLOGY CHANGE**

**Acanthamoeba / Naegleria Exam**

Order Code: ACAN  
Fee Code: 32388  
Reference Laboratory: Mayo ACANT (80401)  
New Reference Lab: Mayo ACARP

Effective January 18, 2017, Mayo Medical Laboratories will replace the Acanthamoeba/Naegleria exam by Direct Wet Prep/Culture with Acanthamoeba species Molecular Detection by PCR (CPT 87798). This test is used as an aid in the diagnosis of amebic keratitis in conjunction with clinical findings.

Collection Instructions: The preferred specimen for Acanthamoeba PCR from an ocular source is corneal scraping or biopsy. Fluorescein dye may interfere with testing and should not be used prior to collection. Submit only one of the following specimens: 1) fresh ocular tissue, ocular or corneal scrapings, or contact lenses in a sterile container with 1 mL of sterile saline, minimal essential media (MEM), or viral transport media 2) contact lens solution in a sterile container, 3) formalin-fixed paraffin-embedded (FFPE) ocular tissue in a sterile container. Refrigerate.
